## The mdframed package

Examples for framemethod=PSTricks

Marco Daniel v1.3 2012/02/04

In this document I collect various examples for framemethod=PSTricks. Some presented examples are more or less exorbitant.

#### **Contents**

1	Loading	1	${\bf Example} \ 2-{\bf hidden} \ {\bf line} + {\bf frame}$	
			m title	2
2	Examples	1	Example $3$ – Dash Lines $3$	3
	Example 1 – very simple	2	Example $4$ – Double Lines $3$	3

# 1 Loading

In the preamble only the package mdframed width the option framemethod=PSTricks is loaded. All other modifications will be done by \mdfdefinestyle or \mdfsetup.

#### Note

Every \global inside the examples is necessary to work with the package showexpl. X

## 2 Examples

All examples have the following settings:

```
\mdfsetup{skipabove=\topskip, skipbelow=\topskip}\
\newrobustcmd\ExampleText{%}
An \textit{inhomogeneous linear} differential equation has the form
\begin{align}
L[v] = f,
\end{align}
where $L$ is a linear differential operator, $v$ is the dependent variable, and $f$ is a given non-zero function of the independent variables alone.
}
```

#### Example 1 – very simple

An inhomogeneous linear differential equation has the form

$$L[v] = f, (1)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

#### Example 2 - hidden line + frame title

```
\global \mdfapptodefinestyle { exampledefault } { % topline=false , rightline=false , bottomline=false , frametitlerule=true , innertopmargin=6pt , outerlinewidth=6pt , outerlinecolor=blue , pstricksappsetting={\addtopsstyle { mdfouterlinestyle } { linestyle=dashed } } , innerlinecolor=yellow , innerlinewidth=5pt } % \begin { mdframed } [ style=exampledefault , frametitle={Inhomogeneous linear } ] \ExampleText \end{mdframed}
```

#### Inhomogeneous linear

An inhomogeneous linear differential equation has the form

$$L[v] = f, (2)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

### Example 3 - Dash Lines

```
\global \mdfdefinestyle { exampledefault } { % pstrickssetting = {linestyle = dashed ,} , linecolor = red , linewidth = 5pt } \begin { mdframed } [ style = exampledefault ,] \ExampleText \end { mdframed }
```

An inhomogeneous linear differential equation has the form

$$L[v] = f, (3)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

### Example 4 – Double Lines

```
\global \mdfdefinestyle { exampledefault } {%
    pstrickssetting={doubleline=true, doublesep=6pt},
    linecolor=red, linewidth=5pt, middlelinewidth=4pt}
\begin{mdframed} [style=exampledefault,]
\ExampleText
\end{mdframed}
```

An inhomogeneous linear differential equation has the form

$$L[v] = f, (4)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.
